RX Family SX-ULPGN-2000 Wi-Fi Module Control Module Using Firmware Integration Technology

Rev.1.13

## 2. Description

The main change is as follows.

### 2.1 Issue Fixed

The following issue has been fixed.

If `vsscanf` (standard function) in the following APIs runs while variables of 1[byte] and 2[byte] are assigned to the storages specified by the conversion specifiers `%d` and `%2x`, data in the neighboring addresses of the storage variables may be corrupted.

Cause of the problem: When the conversion specifiers `%d` and `%2x` are used in `vsscanf`, 4[byte] is assigned to the storages. This is in the specifications of the CC-RX, GCC, and IAR toolchains.
